In order to adapt to the needs of urban modernization , turning the construction waste into treasure, YIFAN successfully launched construction waste disposal equipment. This equipment consists of jaw crusher, impact crusher, vertical shaft impact crusher, hydraulic cone crusher, vibrating screen and vibrating feeder to crush and screen construction waste. The finished products can be widely used in baking-free brick, road foundation, building industry. It provides urban construction with a new development idea.

Technics Flow

1. Feed and the coarse crushing
2. Screening system
3. High pressure washing system
4. Secondary crushing, tertiary crushing
5. Waste water recovery system
6. Dust purification system
7. Automatic control system

Finished products that processed by construction waste disposal equipment

1. After sorting, eliminating or crushing, most of construction waste can be reused as renewable resources, like iron and steel scrap, iron wire, scrap wire and various scrap parts can be made into all kinds of steel.
2. Construction waste, like: bricks, stones and concretes can replace sand to be used for masonry mortar, plastering mortar, concrete cushion. They are also used to make building blocks, causeway bricks and lattice bricks etc.

Regeneration construction waste---to realize reused, reduced, and recycled economic benefits, social benefits and ecological benefits

1. Making use of renewable raw materials to process renewable products will achieve tax support of the government.
2. Save landfill costs and reduce pollution.
3. Reduce mining natural sands, protect natural resources and environment.
4. We already built construction waste disposal demonstration production line in Chengdu Du-

SHANDE TECHNOLOGY (BEIJING) CO., TTD.
